Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a multi-contact connector, classified in class 439, subclass 682.
- II. Claims 8-19, drawn to an electrical plug, classified in class 439, subclass 692.
- III. Claims 20-34, drawn to a socket silo, classified in class 439, subclass 374.
- IV. Claims 35-43, drawn to a latch, classified in class 439, subclass 357.
- V. Claims 44-47, drawn to a socket, classified in class 439, subclass 682.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I-V each have separate utility such as the ability to be used in a different device. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to attorney Marcus Simon on April 20, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
